SMALL CHIP.
NO PROBLEM.

Windshield Stone Chip Repair

A small rock chip can spread into a larger crack. Have it checked early.

WHY REPAIR EARLY?

Temperature changes and road vibration can make damage spread. Repairing an eligible chip may help avoid windshield replacement.

CAN YOUR CHIP BE REPAIRED?

Size, depth, location and condition matter. We'll inspect the damage to determine whether repair is appropriate.

WHAT SHOULD YOU EXPECT?

The repair process is a resin injection that helps stabilize the damaged area, preventing the chip from spreading. While the resin may improve its appearance, a visible mark still may remain.

UNTIL IT'S CHECKED...

Avoid sudden temperature changes, such as blasting hot or cold air directly onto the windshield.

GOT A CHIP? LET'S TAKE A LOOK.
